

The screenshot shows a Java development environment with the following details:

- File Explorer:** Shows files like DisplayCharacters.java, CountVowels.java, ReverseString.java, PalindromeCheck.java, Personal.java, Internals.java, External.java, Bank.java, Main.java, BookDemo.java, CurrentAccount.class, RideApp.java, SavingsAccount.class, and ShapeTest.java.
- Code Editor:** Displays the `RideApp.java` file containing Java code for a ride application. The code defines an interface `Ride` and three implementations: `Mini`, `Prime`, and `SUV`. Each implementation has a static final rate and a method to calculate fare based on distance.
- Terminal:** Shows a command-line session running on `C:\Users\student\Desktop\IMD4CS012>`. The user runs `java -enable-preview -XX:+ShowCodeDetailsInExceptionMessages -cp C:\Users\student\AppData\Roaming\CodeUser\workspaceStorage\b3974c1dc57e56ed22526621f0b03b9e\RideApp.jar;jdt_wt\IMD4CS012_dbc08ed\bin RideApp`. The output shows a warning about a shared archive file and then prompts for a ride type (Mini, Prime, SUV). The user enters "SUV" and sees the total fare for 5.0 km.
- Bottom Status Bar:** Shows the current line (Ln 76), column (Col 2), spaces (Spaces 4), encoding (UTF-8), Java version (Java 8), and date/time (11:10:12, 19-11-2025).
